

Study Abroad

Experience abroad, mastery of foreign languages and intercultural skills are getting increasingly important in today's globalised labour market. Periods of studies abroad are regarded as important and often decisive criteria for hiring new employees.

The organization of stays abroad takes longer than comparable study phases within Germany, especially if a scholarship or visa has to be applied for. Therefore, interested students should start planning about one year before starting their stay abroad.

A list of partner universities can be found [here](#).

The departmental international relations offices and the staff of the **International Office** offer students comprehensive assistance with the organisation of studies abroad, such as for:

- theoretical study semesters at partner universities
- internships in industrial companies
- preparation of final theses

Both the two English-language master's degree courses in Biotechnology (MBT) and Process Engineering (MPE) comprise one study semester in Poland, see [Study in Offenburg](#).
